EXTENSION PACK

Python extension for Visual Studio Code

A Visual Studio Code extension with rich support for the Python language (for all actively supported Python versions), providing access points for extensions to seamlessly integrate and offer support for IntelliSense (Pylance), debugging (Python Debugger), formatting, linting, code navigation, refactoring, variable explorer, test explorer, environment management (NEW Python Environments Extension).

Support for [vscode.dev](#)

The Python extension does offer some support when running on [vscode.dev](#) (which includes [github.dev](#)). This includes partial IntelliSense for open files in the editor.

Installed extensions

The Python extension will automatically install the following extensions by default to provide the best Python development experience in VS Code:

Pylance – performant Python language support

C/C++ for Visual Studio Code

Repository | Issues | Documentation | Code Samples

Live Shareenabled

The C/C++ extension adds language support for C/C++ to Visual Studio Code, including editing (IntelliSense) and debugging features.

Pre-requisites

C++ is a compiled language meaning your program's source code must be translated (compiled) before it can be run on your computer. VS Code is first and foremost an editor, and relies on command-line tools to do much of the development workflow. The C/C++ extension **does not include a C++ compiler or debugger**. You will need to install these tools or use those already installed on your computer.

C++ compiler pre-installed

C++ debugger pre-installed

DETAILSFEATURESCHANGELOG

Prettier Formatter for Visual Studio Code

Prettier is an opinionated code formatter. It enforces a consistent style by parsing your code and re-printing it with its own rules that take the maximum line length into account, wrapping code when necessary.

Before Formatting using prettier code formater

After Formatting using prettier code formater

The screenshot shows the Visual Studio Code editor interface with a dark theme. The Explorer sidebar on the left shows the file 'sample.html' under the 'Data Structures' folder. The main editor window displays the content of 'sample.html', which is an HTML document. The code is formatted with consistent indentation and line wrapping. The status bar at the bottom indicates the current position is Line 3, Column 9, with 4 spaces, UTF-8 encoding, CRLF line endings, and the Prettier formatter is active.

```

GitLens — Git supercharged

GitKrakengitkraken.com52,957,730★★★★☆(941)

Supercharge Git within VS Code — Visualize code authorship at a glance via Git blame annotations and CodeLens, seamlessly navigate and explore Git repositories, gain valuable insights via rich visualizations and powerful comparison commands, and so much more

Switch to Pre-Release VersionDisableUninstallAuto Update

DETAILSFEATURESCHANGELOG

GitLens — Supercharge Git in VS Code

Understand any line of code, keep every branch, worktree, and coding agent in view, and ship cleaner history — without leaving VS Code.

GitLens is an open-source extension built and maintained by GitKraken, and installed more than 51 million times.

Your repository moves faster than it used to. Coding agents open branches, worktrees pile up, and pull requests stack while you're still reading a diff. GitLens pulls all of it into one interactive view — history, working changes, branches, worktrees, and live agent activity together — then helps you review it, rebase it, and shape it into commits someone can actually read.

DETAILS

FEATURES

CHANGELOG

Microsoft Visual Studio Live Share

Visual Studio Live Share enables you to collaboratively edit and debug with others in real time, regardless what programming languages you're using or app types you're building. It allows you to instantly (and securely) share your current project, and then as needed, share debugging sessions, terminal instances, localhost web apps, and more! Developers that join your sessions receive all of their editor context from your environment (e.g. language services, debugging), which ensures they can start productively collaborating immediately, without needing to clone any repos or install any SDKs.

Additionally, unlike traditional pair programming, Visual Studio Live Share allows developers to work together, while retaining their personal editor preferences (e.g. theme, keybindings), as well as having their own cursor. This allows you to seamlessly transition between following one another, and being able to explore ideas/tasks on your own. In practice, this ability to work together and independently provides a collaboration experience that is potentially more natural for many common use cases.

Installation

1. If needed, install Visual Studio Code for Windows (7+), macOS (Sierra+), or Linux (details).
