Extension: GitLens — Git supercharged

GitLens — Git supercharged

GitKraken gitkraken.com 52,968,850 ⭐⭐⭐⭐☆ (941)

Supercharge Git within VS Code — Visualize code authorship at a glance via Git blame annotations and CodeLens, seamlessly navigate and explore Git repositories, gain valuable insights via rich visualizations and powerful comparison commands, and so much more

Switch to Pre-Release Version Disable Uninstall Auto Update

DETAILSFEATURESCHANGELOG

GitLens — Supercharge Git in VS Code

Understand any line of code, keep every branch, worktree, and coding agent in view, and ship cleaner history — without leaving VS Code.

GitLens is an open-source extension built and maintained by GitKraken, and installed more than 51 million times.

Your repository moves faster than it used to. Coding agents open branches, worktrees pile up, and pull requests stack while you're still reading a diff. GitLens pulls all of it into one interactive view — history, working changes, branches, worktrees, and live agent activity together — then helps you review it, rebase it, and shape it into commits someone can actually read.

Start your free 14-day Pro trial — no credit card required.

GitLens Community is free and open-source, forever — and several Pro features, the Commit Graph among them, are free on public repos.

HELP.md > abc # Simple Line Editor (Minimal Edition) — Help > abc ## Error Handling

You, 2 weeks ago | author (You)

1 # Simple Line Editor (Minimal Edition) — Help

2

3 A command-line line editor. Type a command name (case-insensitive) at

4 the `editor>` prompt, followed by any arguments. Line numbers are

5 ****1-indexed**** (the first line is line 1). Text matching inside the

6 document (FIND, REPLACE) is ****case-sensitive****, even though the command

7 names themselves are not.

8

9 Type `HELP` at any time inside the editor to see the command list again.

10

11 ****Limits:**** up to 500 lines, up to 255 characters per line.

12

13 ---

14

15 ## Commands

16

17 ### `SHOW` — Display the document

18 Prints every line with its line number.

19

20

21 editor> SHOW

22 --- DOCUMENT START ---

23 1 | The Quick Brown Fox

24 2 | jumps over the lazy dog

25 --- DOCUMENT END ---

DETAILS

FEATURES

CHANGELOG

Microsoft Visual Studio Live Share

Visual Studio Live Share enables you to collaboratively edit and debug with others in real time, regardless what programming languages you're using or app types you're building. It allows you to instantly (and securely) share your current project, and then as needed, share debugging sessions, terminal instances, localhost web apps, and more! Developers that join your sessions receive all of their editor context from your environment (e.g. language services, debugging), which ensures they can start productively collaborating immediately, without needing to clone any repos or install any SDKs.

Additionally, unlike traditional pair programming, Visual Studio Live Share allows developers to work together, while retaining their personal editor preferences (e.g. theme, keybindings), as well as having their own cursor. This allows you to seamlessly transition between following one another, and being able to explore ideas/tasks on your own. In practice, this ability to work together and independently provides a collaboration experience that is potentially more natural for many common use cases.

Installation

1. If needed, install Visual Studio Code for Windows (7+), macOS (Sierra+), or Linux (details).

2. Download and install the Visual Studio Live Share extension for Visual Studio Code.

3. Wait for the extension to finish downloading and then reload VS Code when prompted.ss

4. Once complete, you'll see Live Share appear in your status bar. You can now begin collaborating with others immediately! Check out the quickstart below for information on how to get started.
