HackerRank : A collection of optimized solutions for classic HackerRank competitive programming problems implemented in C.

Summary Table: Complexity Analysis

Diagonal Difference Time Complexity: $O(N)$ Space Complexity: $O(1)$ Primary Approach: Single-pass linear iteration over primary & secondary diagonals

Dynamic Array Time Complexity: $O(Q)$ Space Complexity: $O(N + Q)$ Primary Approach: 2D dynamic memory allocation with amortized $O(1)$ array resizing (realloc)

Time Conversion Time Complexity: $O(1)$ Space Complexity: $O(1)$ Primary Approach: String parsing (sscanf) and conditional arithmetic formatting

Compare the Triplets Time Complexity: $O(1)$ Space Complexity: $O(1)$ Primary Approach: Direct element-by-element comparison across fixed 3-element arrays

Sparse Arrays Time Complexity: $O(Q * N * L)$ Space Complexity: $O(N * L)$ Primary Approach: Linear string matching per query (strcmp)
